# De-coupling Summary of Events

- Since its launch in February 2014, more than 5 years ago, the Day-Ahead Multi Regional Coupling (MRC) has been operating successfully.
- On the 7th June an issue occurred which prevented the EPEX CWE and EPEX GB order books from being sent to the common coupling system.
- The incident was caused by an internal IT issue at EPEX and was not caused by the common market coupling algorithm.
- The issue could not be fixed in time and at 11:50 IST the market was informed about the partial decoupling of EPEX CWE, EPEX GB and consequently, SEMOpX
- This triggered the execution of the agreed fallback procedures.
- Common coupling system and procedures worked as expected, ensuring the coupling of the remaining part of MRC.

# Resettlement Update

June 20<sup>th</sup> 2019

# Overview – Resettlement Drivers

**(i) Modifications** - Two high priority modifications relating to Fixed Cost Payments\* have been deployed to production on the 11<sup>th</sup> June (See Initial Settlement 8<sup>th</sup> June):

- Mod\_07\_19 / CR77 - No-Load Costs
- Mod\_34\_18 / CR73 - Make-Whole Payments

**(ii) Fixed Costs Transfer Defect** - A data transfer defect resulted in low Fixed Costs\* being paid to Participants from October 1, 2018 to 27 January 2019. This has accrued valid Fixed Charges of €32 million that will be paid out over 16 weeks on the commencement of M+4 on the 5<sup>th</sup> July

**(iii) CFC & IP QBOA Defects** – 6/8 Fixed Costs and 3 Settlement QBOA fixes deployed 11<sup>th</sup> June (See Initial Settlement 6<sup>th</sup> June). Remaining two CFC defects relate to the transfer of heat state to settlements and the recovery of saved costs (CSUR/ CNLR)

*\*Fixed Cost Payments or Charges (CFC) - the differences between how a Participant would ideally run their unit to meet its ex-ante market commitments and how the unit was operated to support a secure operate power system.*

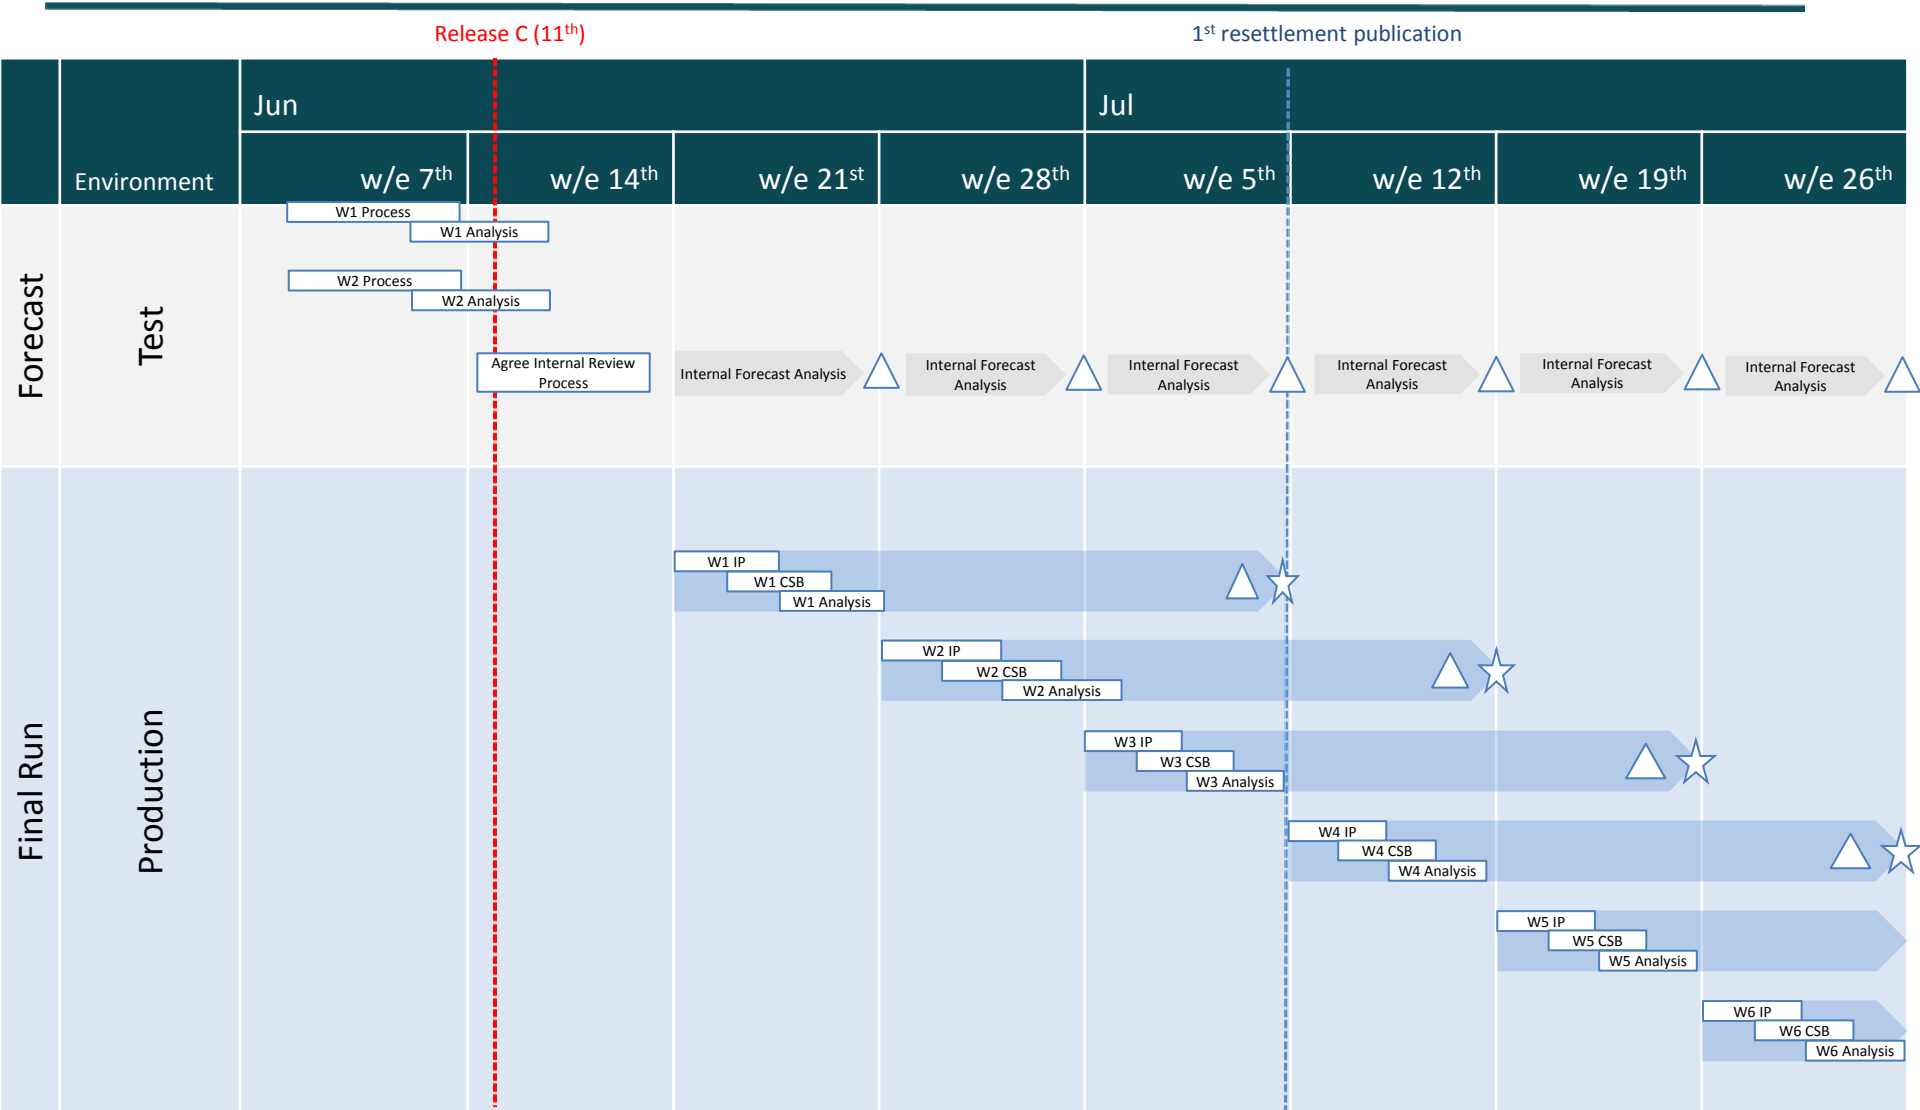

# Resettlement - Processing

## Planning on running a single resettlement process (Inc. accelerated catch-up):

- ❑ The priority is the large volume of formal queries/defects to be captured in first month of resettlement (October 2018).
  
- ❑ Simultaneous resettlement of different billing periods is not planned due to the following considerations:
  - Additional large volume of statements for actual M4 BALIMB/CRM/MO could affect participants processing ability i.e. multiple REPT\_044 for simultaneous resettlement runs.
  - Cash collateral impacts of catch-up resettlement as well as actual M4 in single SD.
  - Re-running of multiple IPs for resettlement has an implication for the accuracy of initial conditions because every day leading into next.

# Fixed Cost Payments or Charges - Overview

- Fixed Cost Payments or Charges:
  - Difference between Market Operations and Physical Operations can result in units incurring or saving additional fixed costs versus those incurred in a unit's ex-ante market schedule;
  - Fixed costs include additional or reduced number of starts, and additional or reduced number of Imbalance Settlement Periods where the unit is synchronised and incurring fixed costs for operating.
- Whether these charges or payments apply depends on Commercial Offer Data used in settlement:
  - If settlement is based on Simple format, fixed costs can be incorporated into those Price Quantity Pairs, with fixed costs recovered through the Imbalance and Premium Components;
  - If settlement is based on Complex format, fixed costs are explicitly stated while Price Quantity Pairs represent variable costs, therefore this side-payment mechanism is needed to recover fixed costs.
- This Payment or Charge is intended to:
  - Make the unit whole if their balancing market revenues are not sufficient to cover their additionally incurred fixed costs; and
  - To recover the unit's fixed costs which were saved.

# Fixed Cost Payments or Charges - Key calculations

Fixed Cost Payments or Charges has four main formulas feeding into its calculation:

$$CFC_{ub} = \sum_{k \in b} CMWP_{uk} - \sum_{\gamma \in b} (CNLR_{u\gamma} + CSUR_{u\gamma})$$

$$CMWP_{uk} = \text{Max}(COCMWP_{uk} - CREVMWP_{uk}, 0)$$

Per contiguous operating period

$$COCMWP_{uk}$$

$$= \sum_{\gamma \in k} (CNLR_{u\gamma} + CSUR_{u\gamma}) + \sum_o \sum_i (PBO_{uoi\gamma} \times (QAOLF_{uoi\gamma} - \text{Max}(QAOUNDEL_{uoi\gamma}, QAObIAS_{uoi\gamma}, QAOTOTSOLF_{uoi\gamma}))) + \sum_o \sum_i (PBO_{uoi\gamma} \times (QABLF_{uoi\gamma} - \text{Min}(QABUNDEL_{uoi\gamma}, QABBIASt_{uoi\gamma}, QABNFLF_{uoi\gamma}, QABTOTSOLF_{uoi\gamma}))))$$

$$CREVMWP_{uk}$$

$$= \sum_{\gamma \in k} \left( \sum_o \sum_i (\text{Max}(PBO_{uoi\gamma}, PIMB_{\gamma}) \times (QAOLF_{uoi\gamma} - \text{Max}(QAOPOLF_{uoi\gamma}, QAObIAS_{uoi\gamma}, QAOUNDEL_{uoi\gamma}, QAOTOTSOLF_{uoi\gamma}))) + \sum_o \sum_i (\text{Min}(PBO_{uoi\gamma}, PIMB_{\gamma}) \times (QABLF_{uoi\gamma} - \text{Min}(QABBPOLF_{uoi\gamma}, QABBIASt_{uoi\gamma}, QABUNDEL_{uoi\gamma}, QABNFLF_{uoi\gamma}, QABCURLLF_{uoi\gamma}, QABTOTSOLF_{uoi\gamma})))) + CAOPO_{u\gamma} + CABBPO_{u\gamma} + CCURL_{u\gamma} \right)$$

# Fixed Cost Payments or Charges - Scenarios

Pure Commitment (when Complex COD applies):

- Start cost payable;
- No-load costs payable for entire commitment period.

# Fixed Cost Payments or Charges - Scenarios

Pure Decommitment (when Complex COD applies):

- Start cost recoverable;
- No-load costs recoverable for whole decommitment period.

# Fixed Cost Payments or Charges - Scenarios

Keep On (when Complex COD applies):

- Start cost recoverable for prevented start;
- No-load costs payable for additional commitment period.

# Fixed Cost Payments or Charges - Scenarios

Two-Shift (when Complex COD applies):

- Start cost payable for additional start;
- No-load costs recoverable for reduction in commitment period.

# Fixed Cost Payments or Charges - Modifications

There have been two modifications made to the T&SC since go live:

- MOD\_34\_18 which relates to units being made whole for their negative imbalance revenue, including when the unit has no balancing market related costs (effective from 27<sup>th</sup> January 2019). Martin Kerin chaired a call with participants on how to calculate this mod on 24<sup>th</sup> May.
- MOD\_07\_19 which relates to an incorrect logical connector in the No Load Cost in T&SC F.11.2.3 (a) part (i) and (ii). The “and” has now changed to “or” which is effective from 3rd May 2019.

Both modifications are in production settlement system from 11<sup>th</sup> June 2019.

# Fixed Cost Payments or Charges - Modifications

Example of MOD\_07\_19

Prior to the mod if a unit had a non zero FPN value and a non zero meter value then the no load costs would have applied.

From 3<sup>rd</sup> May onwards, units will not receive no load costs in this scenario.

# Fixed Cost Payments or Charges - Modifications

Example of MOD\_07\_19

In the example above, the unit will continue to receive no load costs when FPN equals zero and QM equals a non zero value.

# Pricing Disputes

- All known manifest errors have been closed in Release C. The rolling dispute should cease from 12<sup>th</sup> June 2019.
- If any new errors are detected in the pricing calculation, then we would remind Participants to follow the Pricing Dispute process; and continue to raise any anomalies identified with SEMO for investigation.
- **Planned Repricing Implementation Date:  
August / September 2019\* - Release D**

\*Pending successful testing.

- Views on the timeline welcome.
- Repricing timeline assumes that parameter for the Pricing Materiality Threshold will be reduced to 0%.
  - SEMO will **not** be pursuing a Modification to the T&SC, instead SEMO intend to propose a parameters change to the Price Materiality Threshold.
- Currently the Pricing Materiality Threshold is set at 5% of Imbalance Price
