MOD_08_17
Decremental Price Quantity Pair Submission

19th October 2017

Summary Information

➢ Proposal seeks to make the submission of Decremental P/Q pairs mandatory for all units who submit Incremental P/Q pairs

➢This is necessary to avoid ambiguity in the composite Inc and Dec curves that must be formulated and therefore to avoid the potential for unintended commercial outcomes

➢Current TSC drafting is ambiguous as to which Incs would be applied as Decs where both complex and simple COD apply and Decs are not submitted

➢Issues were also identified with validating such composite curves to ensure that they are monotonically non-decreasing with a 'set decs equal to incs' approach

➢Proposal also seeks to amend provisions for application of Decremental P/Q pairs for Dispatchable, Priority Dispatch, zero marginal cost units so that these must be submitted as zero as opposed to being deemed zero if submitted as non-zero

➢This is necessary to ensure transparency in the application of Decremental COD and aligns to the current system build
