Solar in the ISEM

19th October 2017

Summary Information

- Proposal seeks to include a provision for Solar Powered Units within Part B of the Code
- Takes the same approach for cutover to ISEM as was applied in SEM in terms of flagging as wind with SEMO separately indicating which unit IDs relate to Solar Units
- Removes the publication of Outage Adjusted Wind and Solar Forecasts
- It is not possible to apply a bespoke treatment for cutover as was originally intended
- This approach ensures a provision is in place for go live which can be refined in the future
- Outage Adjusted Forecast data is not available, this was originally intended for use in the AOLR solution but is no longer required for that purpose
