# Colour Coding of Training Materials and Sessions

Various types of Participants have different training needs. The relevance of self-learning and instructor led training sessions to specific participant groups is marked using green, yellow and red* as indicators:

- In green – Training Topics which are highly relevant for a specific type of participating organisation (it should be taken),
- In yellow – Training Topics which are moderately relevant for a specific type of participating organisation (it might be taken),
- In red - Training Topics which are not relevant for a specific type of participating organisation (it could be skipped).

Colour coding is matched to a type of participating organisation – not to a role within this organisation.

All self-learning material and every Instructor-led Training session is flagged with these three colours to assist the trainee in making a decision on whether  or not to enrol in the training.

*Colour codes are provided on a basis of subjective judgment of EirGrid/SONI Subject-Matter Experts*
